What is the Cybersecurity Capacity Maturity Model?

The Cybersecurity Capacity Maturity Model (CMM) is a first-of-its-kind model to review cybersecurity capacity maturity enabling nations to self-assess, benchmark, better plan investments and national cybersecurity strategies, as well as set priorities for capacity development.

At least 87 States have used the CMM designed by the Global Cyber Security Capacity Centre (GCSCC) in Oxford, UK. 36 States have used the process a second time to review their strategies.

FORMAT

We invite delegates and stakeholders attending the OEWG on security of and in the use of ICTs to attend a discussion on the Capacity Maturity Model.

Professor Sadie Creese of the GCSCC will introduce the Model and host a panel discussion including Member States who have undertaken assessments and implementers of the Model.

The event will be at UN headquarters (room tbc) and be in-person only.

REGISTRATION

PLEASE REGISTER FOR ATTENDANCE USING THIS LINK BY 20 JULY

For any enquiries on the event, please contact: elizabeth.page@fcdo.gov.uk
