

## **The 6th meeting of the OEWG, dedicated stakeholder session July 27, 2022**

Thank you, Mr. Chair.

First, our businesses are categorized in Digital Systems and Services, Green Energy and Mobility, Connective Industry, and Connective Automotive Business. We adopt Digital Transformation and Green Transformation in critical infrastructure such as energy, train, water, banking, manufacturing, smart city. Digital Twin towards Metaverse is on the horizon. Our aim is to provide safe, secure, resilient products and services for customers and citizens on our planet.

Second, Working with IT/OT/IoT, recent cyber threats are non-trivial. The risks in global supply chain are complex issues by product by product and each layer of suppliers. Thus, we need more focused Product Based SIRT or PSIRT coordinating for supply chain partners. To serve our customer, one thing is still true as old proverb says, “When in Rome, do as the Romans do” to serve each of the customers on the planet. To secure global supply chain, we recognize great efforts already made by States, Industry, Academia, and trusted industry groups.

Third, some thoughts on short-term, mid-term and long-term goals. For short-term, we need to know the facts immediately, coordinating with governments and industry partners to address Asymmetric vulnerabilities. For mid-term, we need to strengthen Digital Trust mechanism and technology with IT/OT/IoT with AI. Security and Safety by design are way to go. Longer-term goals include to align with 17 Sustainable Development Goals or SDGs, including #9) Industry, Innovation and Infrastructure. Further, we committed #13) Climate Action, already. Shifting to Circular Economy is an example.

Finally, training and exercise are essential in capacity building, partnering with multiple governments, other industry partners, and regions.

In conclusion, trusted multistakeholder capacity building are essential for global peaceful ICT.  
Thank you, Mr. Chair.
