Ref.: UNGA Res 75/61: United Nations study on disarmament and non-proliferation education

Duration: June 2020 until May 2022

Executive Summary

Middle East Treaty Organization ([METO](http://www.wmd-free.me)) educational work provide deep insight into disarmament and geopolitics to tertiary students and professionals across the region.

Our Summer Course on [WMD Disarmament & Security in the Middle East](http://www.wmd-free.me) commenced on 10 August to 7 September 2021. The course included 9-sessions with students from 23 countries and achieving gender-balance. Through class discussion and guest speakers from academia and practitioners in WMD non-proliferation, our course provides students with the ability to analyse challenges, revisit past efforts to achieve a WMD Free Zone and ways to strengthen international non-proliferation regimes. Students also identify future scenarios to rid the region of all WMDs through a negotiation simulation. The best papers produced by our students as part of the final assessment are published in the [METO Student Journal](http://www.wmd-free.me). Our next Summer Course will commence in early July 2022.
